

RESEARCH TOPIC FOR THE PARISTECH/CSC PHD PROGRAM
(one page maximum)

Field: Information and Communication Sciences and Technologies

Subfield: Robotics, Augmented Reality

Title: Human–Robot Collaboration in Integrated Manufacturing using Augmented Reality

ParisTech School: Arts et Métiers Sciences et Technologies

Advisor(s) Name: Fakhreddine Ababsa, Full Professor, Arts & Métiers ParisTech

Advisor(s) Email: Fakhreddine.Ababsa@ensam.eu

Research group/Lab:): Institut Image / LISPEN

Lab location: Chalon sur Saône

(Lab/Advisor website): <http://institutimage.ensam.eu/>

Short description of possible research topics for a PhD: (10-15 lines in English + optional figure)

In the industry of the future, robots would work in collaboration with human by jointly performing the assigned tasks and sharing the same workspace. Hence, their actions must be controlled in real time according to the human actions. Visual tracking would allow the worker to be located in the workspace and to recognize his gestures in order to anticipate the robot's control avoiding any collision with him. The aim of this PhD proposal is to investigate new approaches for human-robot collaboration using augmented reality. The idea is to develop an augmented reality system, which allows the worker to visualize simultaneously and in real time the robot's control information and also the instructions to be performed by the user. 3D human tracking and gesture recognition based on machine learning approaches will also be investigated. A depth sensor placed in top will be used, the acquired data will be analysed to detect the operator's presence area and to recognize his gesture. Natural user interface will be developed in order to control the application: changing the context/scenario of AR, stopping the robot, etc.

Required background of the student: (What should be the main field of study of the applicant before applying?)

The candidate should have a Master degree or equivalent in Robotics, computer science, or related disciplines. Required skills are experience in C++ software development, Machine learning and pattern recognition, applied mathematics, and a good command of English (reading/writing/speaking). In addition, the successful candidate will be highly self-motivated, passionate about his/her work, and has good ability to work both independently as well as in a team in a multidisciplinary environment.

A list of 5 (max.) representative publications of the group: (Related to the research topic)
